## DETAILED ACTION

### *Examiner's Reasons for Allowance*

Claims 1-29, 42-45, 47-49 and 52-53 are allowed. See file history. The application has no non-provisional parent application. The application does have priority claim to a provisional application filed in year 2003.

The following is an examiner's statement of reasons for allowance: see the file history. The file history contains numerous Office Actions and numerous Amendments from Applicant. The file history (including the Appeal Brief) contains reasons for allowance. The prior art did not teach or suggest the particular features of the claims.

In addition, the following comments may be useful.

As regards the most recently submitted IDS, one may note the most recently submitted prior art in IDS that were mentioned in the original filing by Applicant. Applicant had not formally submitted copies of the prior art and Applicant had not formally submitted IDS. The most recently submitted IDS corrects those issues. Thus those issues (potentially improperly cited prior art) are now moot.

As regards the prior art, numerous Office Actions and numerous Amendments already discussed the prior art that were only recently cited and submitted in IDS. In other words, the prosecution had been occurring with the prior art already being discussed. While this may show that the most recently cited prior art were improperly cited until now, the most recently submitted IDS corrects those issues and renders those issues moot.

The numerous Office Actions and numerous arguments submitted by Applicant have clearly defined and narrowed the terms of the claims as in file history. Thus the terms cannot be interpreted as broadly. The entire file history needs to be considered (especially and including the earliest Office Actions and earliest Amendments).

The analyses under 35 USC 101 had been conducted early in the file history. Through both Applicant's arguments and Applicant's Amendments, these claims had been shown to be patent eligible under 35 USC 101. For example, the term "application layer" has special meaning that assumes the underlying hardware. The "application layer" of this patent application (albeit not necessarily outside of the art of the patent application) has special meaning that specifically refers to the hardware layers such as in OSI model (in which the bottom layers include electrical switches, etc.).

### ***Conclusion***
